

FLIGHTVIEW DATA FEEDS

Add powerful real-time flight and airport information to your current travel products & services with FlightView's robust Data Feeds.

FlightView Data Feeds consist of renowned, accurate, reliable flight data including flight schedules, flight status, aircraft position, and airport delays. There are different types of Data Feeds to choose from, depending on the desired content, quantity, frequency, and payment structure.

FlightView Data Feeds are available for integration with web and mobile applications, airport & hospitality displays, and scheduling and dispatching software for ground transportation and aviation companies.

BENEFITS

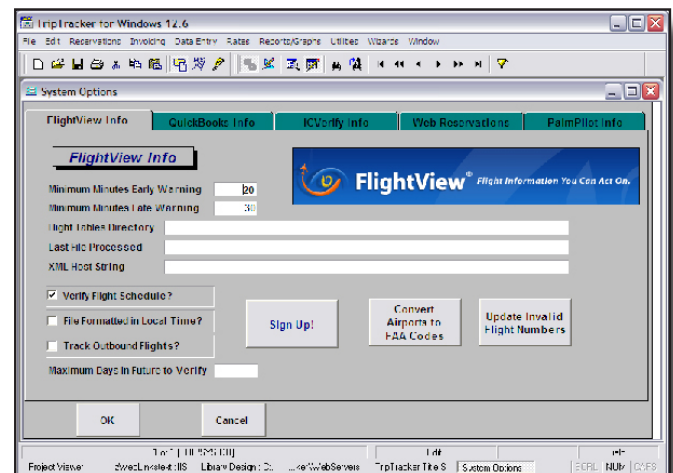

- **ENGAGING CONTENT:** Instantly enhance your products & services with valuable, up-to-date content.
- **CUSTOMER SERVICE:** Enable users to verify flight schedules ahead of time, adjust to same-day flight delays and cancellations, and reduce their need to call airports and airlines.
- **EFFICIENCY:** Streamline your operation by integrating flight information into your scheduling and dispatching applications.
- **GENERATE REVENUE:** Drive more product sales, increased website traffic, and larger audiences.

FEATURES

- Accurate flight schedule and real-time departure and arrival information
- Flight delay and cancellation information
- Real-time airport delay information
- Configurable data content and flexible query interface
- XML or tab-delimited format, conveniently delivered via the Internet

Integrate with your limo software

FLIGHTVIEW DATA FEEDS - MODULES

FV Data XML - Subscription

Help your customers and users proactively adjust their plans due to flight changes, delays, and cancellations, by feeding your applications - Flight Information Display Systems (FIDS), Web Sites, Mobile Apps, Limousine Scheduling and Dispatch systems - with live, accurate FlightView data on a query-by-query basis. Obtain flight status and flight schedule data for a single flight or a small set of flights in simple **XML format**.

Sources:

FV Data Airport Delays

Empower your customers to proactively manage their travel plans by giving them a real-time view of the current arrival and departure delays at top airports across North America. Cascading effects of delays are real and can impact travelers' plans even when they see clear skies out their windows. Use FlightView's Airport Delay Web Service to get airport delay status information for over 170 US and Canadian airports in simple **XML format**.

Sources:

FV Data Flight Tables

Enable your customers and users to perform accurate flight analyses and optimal flight management by pulling large volumes of flight status data for flights across the US and Canada (flight schedules not included). Obtain this data in a **delimited value batch file**. This file contains full flight records for all in-air commercial and general aviation flights with one endpoint in North America; flight status includes actual takeoff & landing times, plus altitude, speed, direction and lat/long. This batch file can feed systems for a number of industries, such as airport operations and ground transportation.

Source:

FV Data Batch & Changes

Get a holistic picture of **all** flights in the US & Canada within a specified time window with **FV Data Batch**. Great for powering applications at multiple locations or for sending out notifications to a broad audience located across North America. Obtain flight status data and flight schedule data for all flights in the time window in a compact **tab-delimited Batch file**. Or to reduce transmission size, use **FV Data Changes** to see info only on flights that have changed between the most recent Batch file and a previous baseline Batch file.

Sources:

FV Data Weather Conditions

Get the **current** weather and/or 5 or 7 day **forecast** for over 900 airports worldwide. Request weather data for 1-5 airports at a time via a Web service, and receive results in **XML format**. Current conditions are updated every 30 minutes, and 5/7 day forecast is updated four times per day. Show current weather conditions or forecast weather for airports in a wide range of internal and consumer applications, as it is often viewed in conjunction with air travel information.
